

## Comparison of Rainfall performance during February 2018 with its Long term mean over the country

- **REVIEW OF THE WEATHER DURING FEBRUARY 2018**

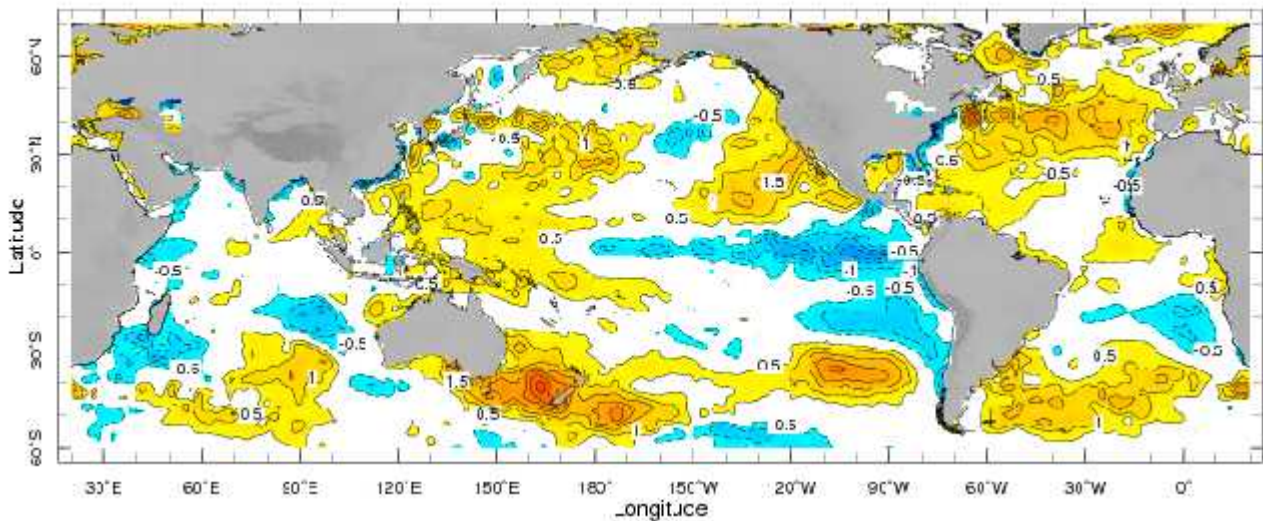

Most parts of the country were wet during the month of February 2018 and almost 77% of the country recorded normal to above average rainfall compared to February cumulative Long-Term Means (LTMs) while 23% recorded below normal rainfall during the month but generally the country recorded widespread enough rainfall.

- **PREVAILING SYNOPTIC CONDITIONS DURING JANUARY 2018- FEBRUARY 2018**

The Sea Surface Temperature (SST) anomaly during the month of January 2018 showed that over central equatorial Pacific Ocean stretching towards the eastern equatorial Pacific region (Niño 4 to Niño 1&2 areas), cooler than average SST anomaly was observed, with the area stretching from central towards western equatorial Pacific Ocean recording warmer than average SST, this situation presents a weak La Niña phase however models show an increased likelihood of persistence of a negative El Niño Southern Oscillation (ENSO) phase through the first quarter of the year 2018. Near average to cooler than average SST conditions dominated western and the eastern sides of equatorial Indian Ocean (Figure 5) This pattern has presented a weak but positive phase of the Indian Ocean Dipole (IOD). Models show persistence of a positive phase of the IOD during the initial periods of year 2018.

- **WEATHER OUTLOOK FOR MARCH 2018**

The forecast indicates that most parts of the country are likely to experience near-average rains during the Month of March 2018.

The month of March 2018, is expected to be within the range of LTM, average with some localized places recording above normal especially in northern and western parts of the country. The onset of the seasonal B rainfall was expected towards this end of February 2018 to early March 2018.

**N.B** This outlook is supplemented by updates at different timescales (24-hours, 5-days and 10-days forecasts) and advisories issued by Rwanda Meteorology Agency.
