## NATURAL

Bulletin $\mathbf{N}^{\circ}$ 27/2016:
$1^{\text {st }}-30^{\text {th }}$ September 2016
Issued on $3{ }^{\text {rd }}$ October 2016

## Highlights:

- Cumulative rainfall for September 2016 was normal in many parts of the country. Rain associated with thunderstorms was distributed across the country, therefore, increase of soil moisture was observed in many parts of the country.
- Almost Daily rainfall activity is expected during October 2016 country wide.

## I. Introduction

a) The comparison between rainfall recorded in "September 2016" and it's long-term mean (LTM) value at each station, is shown below

Cumulative rainfall (in mm) recorded at different stations

| Station | Sep.2016 | LTM Sep. |
| :--- | ---: | ---: |
| Kigali | 79.2 | 76.8 |
| Rusizi <br> (Kamembe) | 125.4 | 113.2 |
| Rubavu <br> (Gisenyi) | 109.3 | 114.6 |
| Nyamagabe <br> (Gikongoro) | 105.8 | 96.6 |
| Ngoma <br> (Kibungo) | 102.2 | 61.1 |
| Gicumbi <br> (Byumba) | 88.5 | 118.7 |
| Busogo | 97.0 | 156.1 |
| Bugarama | 48.6 | 74.8 |
| Musanze <br> (Ruhengeri) | 97.0 | 125.6 |
| Gitega | 148.3 | 73.2 |
| Rubengera | 180.7 | 99.0 |
| Byimana | 221.7 | 83.1 |
| Kawangire | 94.8 | 71.9 |
| Nyagatare | 131.8 | 70.7 |

Table1
b) Rainfall analysis: The next maps show the rainfall recorded during specific period (September and August) monitored with the same dekad at long term average (mean)

Map3: Total Rainfall (mm): ( $1^{\text {st }}-31^{\text {st }}$ Aug.2016)

## II. Detailed observed rainfall during the month of September 2016

August 2016 which was generally dry as shown at all stations (see Map.3\&4), we observe a well pronounced increase of rainfall that occurred in September 2016 (see Map.1\&2):
a) Eastern Province

All representing stations recorded a rainfall amount at normal range to above (see Map.1\&2); analysis also shows the trend of persisted in the north and a decrease in the south.

## b) Northern Province

Only Gicumbi Station marked an increase in rainfall which attained the normal range to climatology by the end of September (see Map.1, 2, 3\&4), other stations had rainfall that was recognized to be in the below normal range (see Map1\&2).
c) Southern Province

September 2016 showed an increase in rainfall amount within the last dekad to reach the mean range; however, the northern part of this region at Byimana Station, the records show rainfall value of 221.7 mm (see Table1) which is almost equal to three-times the long term mean value. The trends show advection of rainfall activities to southwest within this region.
d) Western Province

The western part received rainfall that reached the normal range at all stations (see Map1\&2).

## e) Kigali Region

The central part with 2 representative stations Kigali and Gitega; received above normal rainfall amount compared to climatology (see Map.1\&2); especially the western part of Kigali City at Gitega station, which recorded 148.3 mm

## III. Agricultural impact.

a) Satellite images: Soil Moisture Index (MI)

During dekad $2 \& 3$ of September 2016, there was consistency of moistening the soil and this is confirmed by the above satellite images (see Map5\&6). This persistence rain occurrence and wet soil insures rainfall onset at almost all stations within the last dekad of September; and now the vegetation cover (which is at development stage) continues to increase (developing) In most parts of the country, the moisture index MI>100 (see Map5\&6) for both dekad $2 \& 3$ (which is favorable for development of different varieties of crops).
This coming month (October 2016), we expect rain to continue moistening the soil, especially in the north and western parts of Rwanda. Farmers are advised to harvest rain-water in this month (expected to be the highest pick rainfall value and occurrences) which will be used to support farms during the dry spells of this SOND-Season (towards the end of the season).
b) Rainfall forecast for October 2016

October 2016, we expect rain to continue moistening the soil throughout the whole month of October, especially in the north and western parts of Rwanda:

Kigali City; is expecting to receive normal rain throughout this month.
Eastern Region; is expecting to experience more activities in the north (ranging from normal to above normal), normal in the central and near-normal to below normal for the southern part.

Western Region; is expecting to experience rain throughout the period at normal to above range.
Northern region; is expecting to experience predominantly rain throughout the period at normal range.
Southern Region; is expecting to have rainfall activities throughout the month that may be high in the southwestern part.
N.B: This forecast should be used in conjunction with the daily (24-hour), Three (3), Five (5) and Seven (7) days forecasts issued by the Rwanda Meteorology Agency (Meteo Rwanda)
